WHY CHOOSE MGM BRAKES OVER OTHERS?

CORROSION
FIGHTER® TECHNOLOGY

Note: guide is depicted in orange for visual purposes

Composite Guide
Constructed from heavy-duty, non-metallic composite material.

Center Hole Diaphragm

Patented feature that aligns the piston, diaphragm, power spring and internal push-rod providing the following advantages: maintains component alignment; reduces power spring stress; reduces coil clash; increases center-seal life and eliminates the effects of severe vibration.

Center Hole Shield

Permits visual inspection of stroke alert but prevents entry of contaminants.

Weld Reinforced Non-Pressure Housing

Heavy-gauge formed steel flat-bottom design, epoxy coated for total corrosion protection and "weld-reinforced" mounting studs for added support in extreme vibration applications (bolt actually epoxy coated - depicted here lighter for visual purposes).

Center Seal (Push-Rod Air Seal)

Multi-lipped, pressure activated seal - an MGM exclusive - molded from specially formulated low-temperature resistant nitrile rubber, providing long-term protection against air leaks. Nylon guides eliminate metal to metal contact and premature failure in this critical area.
